This listing of claims will replace all prior versions, and listings, of claims in the application:

**LISTING OF CLAIMS:**

Claim 1 (currently amended): A nonreciprocal circuit device comprising:

a laminated body having an upper surface, a lower surface and side surfaces and comprising a magnetic substrate made of a ferromagnetic material, a permanent-magnet substrate laminated on the magnetic substrate, and a plurality of central conductors disposed on the magnetic substrate, the plurality of central conductors intersecting each other in a central area of the laminated body while being electrically insulated from each other;

a yoke integrated into the laminated body; and

an electrical component provided within the laminated body and electrically connected to one of the plurality of central conductors; wherein

said electrical component is formed on an upper surface of a dielectric substrate in said laminated body; and

said yoke is defined by a magnetic material layer ~~disposed~~ laminated on the upper surface, the lower surface, and the side surfaces of said laminated body; and

an electrode is laminated on a portion of the upper surface, the lower surface or the side surfaces of said laminated body.

Claim 2 (previously presented): A nonreciprocal circuit device according to Claim 1, wherein said dielectric substrate is laminated on a side of the magnetic substrate opposite to the side on which the permanent-magnet substrate is laminated.

Claim 3 (previously presented): A nonreciprocal circuit device according to Claim 2, wherein the component includes a capacitor electrode electrically connected to one end of any one of the central conductors and a ground electrode formed on the lower surface of the laminated body, and the capacitor electrode and the ground electrode constitute a capacitor.

Claim 4 (previously presented): A nonreciprocal circuit device according to Claim 3, wherein the yoke comprises a magnetic film covering the outer surface of the laminated body.

Claim 16 (previously presented): A nonreciprocal circuit device according to claim 1, wherein the component includes a capacitor electrode electrically connected to one end of any one of the central conductors and a ground electrode formed on the lower surface of the laminated body, and the capacitor electrode and the ground electrode constitute a capacitor.

Claim 17 (previously presented): A nonreciprocal circuit device according to Claim 16, wherein the yoke comprises a magnetic film covering the outer surface of the laminated body.

Claim 18 (previously presented): A nonreciprocal circuit device according to Claim 2, wherein the yoke comprises a magnetic film covering the outer surface of the laminated body.

Claim 19 (previously presented): A nonreciprocal circuit device according to Claim 1, wherein the yoke comprises a magnetic film covering the outer surface of the laminated body.

Claim 20 (previously presented): A nonreciprocal circuit device according to claim 1, further including a common electrode disposed on said laminated body and electrically connected in common to said plurality of central conductors and to ground.

Claim 21 (previously presented): A nonreciprocal circuit device according to Claim 1, wherein said laminated body is defined by said dielectric layer, said magnetic substrate disposed on said dielectric layer, and said permanent-magnet substrate

disposed on said magnetic substrate, and said yoke is arranged to cover the upper surface, the lower surface, and the side surfaces of said laminated body.

Claim 22 (previously presented): A nonreciprocal circuit device according to Claim 1, wherein said plurality of central conductors and at least one of a resistor and a capacitor are provided on said dielectric substrate.
